Ursa Major

Ursa Major Robotics (FRC Team 9180) is based at Grandview Heights Secondary in Surrey, BC. Our team brings together students from diverse backgrounds who share a passion for learning, building, and exploring STEAM. With guidance from dedicated teachers and mentors, students take on meaningful roles in design, programming, fabrication, outreach, marketing, and strategy.

Our mission is to create an inclusive environment where students can challenge themselves, experiment, and grow. We focus on building strong technical skills while encouraging teamwork, leadership, and creativity. Whether students are new to robotics or experienced builders, every member contributes to the success and spirit of the team.

Ursa Major Robotics is proud to represent School District 36 and the FIRST® community while promoting innovation, collaboration, and inspiration in STEAM education.

FIRST

FIRST® (For Inspiration and Recognition of Science and Technology) is a global nonprofit organization that uses robotics to inspire students in science, technology, engineering, arts, and math. Since 1989, FIRST® has supported youth in more than 110 countries, providing programs that help students build confidence, develop real-world skills, and discover future career paths.

The FIRST Robotics Competition challenges high school teams to design, build, and program a robot in six weeks. Students work with mentors from education and industry, gaining experience in engineering, teamwork, communication, leadership, and creative problem solving. While the robot is the centerpiece of the program, the real focus is teaching students how to work together, think critically, and take on challenges with resilience.

FIRST® is known for being “More Than Robots®.” Students often enter the program unsure of their abilities but leave with a stronger sense of direction, new skills, and the belief that they can create their own future. Many FIRST® alumni go on to study STEAM fields, reflecting the impact the program has on shaping young innovators.

FIRST® continues to inspire a generation of students to explore STEAM, embrace challenges, and become leaders in a world that increasingly depends on technology and creative thinking.

24/25 Season

The 2024–2025 season was a year of growth, teamwork, and new experiences for Ursa Major Robotics. We began the school year by building team connections and preparing for another competitive season. After kickoff, students worked together to design, build, and program our 2025 robot, applying new strategies and refining past skills.

We competed at the Canadian Pacific Regional, where our robot performed successfully and the team gained valuable experience. Beyond the competition, we also hosted a FIRST® LEGO® League tournament at our school, met new teams, and strengthened our presence within the FIRST® community.

This season highlighted our commitment to learning, collaboration, and continuous improvement, both on and off the field.

Goals

For the 2026 REBUILT℠ season, our team aims to design and build a strong, reliable robot for the Canadian Pacific Regional. We plan to refine our design, fabrication, and coding processes, strengthen communication across all sub-teams, and give students more opportunities to take initiative and develop leadership skills. As we enter our fourth year, we hope to continue building on the teamwork, creativity, and problem-solving abilities gained through previous seasons.

Beyond technical development, we are committed to expanding our presence within the FIRST® community. We plan to grow our outreach efforts, form new connections with local teams and mentors, and inspire younger students through events such as Saturday camps and FLL tournaments. Our goal is not only to compete—we want to learn, collaborate, and contribute positively to our school and community.

Ultimately, we measure our success through the skills gained, the relationships built, and the impact we create. The 2026 season is an opportunity for us to challenge ourselves, support one another, and continue spreading FIRST® values of innovation, inclusion, and STEAM education.

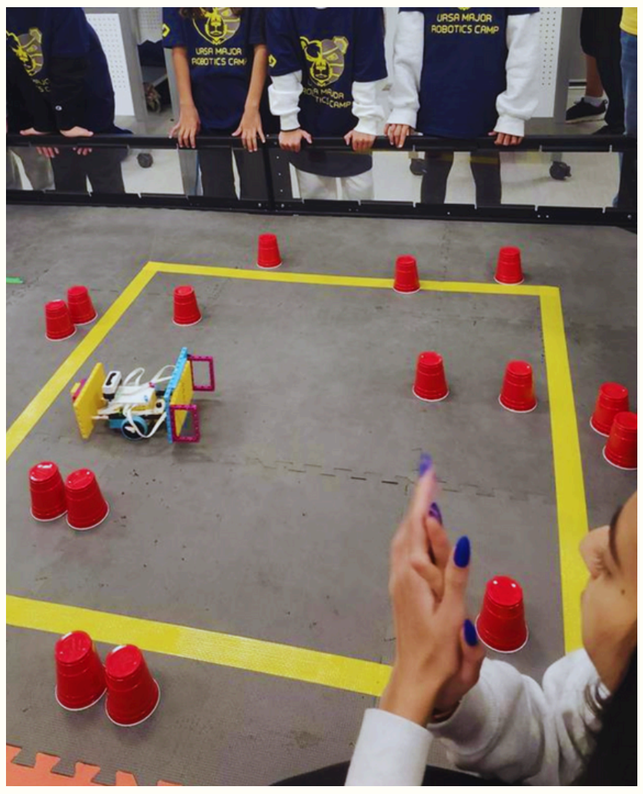

Outreach

Ursa Major Robotics is committed to giving back to our community through hands-on outreach. We host Saturday robotics camps for students in grades 5–7, where participants explore teamwork, creativity, and LEGO robot programming in a fun and engaging environment. We also volunteer at our school's annual FIRST® LEGO® League tournament, taking on roles such as refereeing, field reset, and team queuing. In addition, we participate in school events like Club Fair and the Polar Pop-Up fundraiser to share our robot and promote STEAM.

Alongside our outreach, our team has earned several notable achievements:

- Rookie Year — 2023 CHARGED UP℠: Regional Finalist, Rookie Inspiration Award, Highest Seed Rookie, and Wildcard Award, qualifying us for the FIRST® Championship in Houston.
- Second Year — 2024 CRESCENDO℠: 6th overall at the CANPAC Regional and Captain of Alliance #4.
- Recent Seasons: Continued growth, teamwork, and valuable competitive experience.

These efforts highlight our dedication to learning, community involvement, and continuous improvement.

Budget

Running a FIRST® Robotics team requires meaningful financial support each season. Funding allows us to register for competitions, travel to events, and purchase the materials, tools, and equipment needed to design and build a functional robot. These resources help ensure that students can participate fully in the six-week build season and gain valuable hands-on experience throughout the year.

Our main expenses include initial registration, fees for a second competitive event, robot parts and manufacturing, travel and accommodation costs, and general team supplies used during meetings and build sessions. Sponsorship plays a vital role in covering these needs and gives students the opportunity to develop strong technical skills, collaborate effectively, and represent our school at regional competitions.

Why it Matters

Supporting Ursa Major Robotics directly contributes to accessible, meaningful STEAM education. Sponsorship helps students take part in real engineering work, learn teamwork and problem-solving, and build confidence in a supportive environment. These experiences spark curiosity, inspire future career paths, and empower students to grow into capable innovators and leaders. Your support makes it possible for our team to learn, compete, and make a positive impact in our school and community.

Sponsorship & Support

Sponsorship plays a vital role in keeping our team active and competitive. Support from community partners allows us to design and build our robot, attend competitions, host outreach events, and provide meaningful opportunities for students to develop their skills in STEAM. This support directly strengthens our ability to learn, grow, and participate fully in the FIRST® Robotics Competition.

In return, sponsors gain positive brand visibility, community engagement, and the opportunity to contribute to the development of young people pursuing future careers in science and technology. Sponsoring Ursa Major Robotics means investing in future innovators and supporting the next generation of STEAM leaders.

Alongside financial contributions, we also welcome a wide range of in-kind donations that help our team operate smoothly throughout the season. These may include robot materials such as aluminum, motors, and gear systems; tools or technology; meals and snacks for long build sessions; travel accommodations; company merchandise; or items for raffles and fundraising. Every contribution helps reduce costs and ensures we can stay focused on learning, building, and competing to the best of our abilities.

Thank you

Thank you for considering support for Ursa Major Robotics. Each season brings new challenges, opportunities, and experiences, and we are grateful for the community partners who make our journey possible. Your support helps students gain skills, explore STEAM, and build confidence that lasts far beyond the competition season.

We look forward to continuing to grow, learn, and contribute to our community through robotics and innovation.

Ursa Major Robotics Sponsorship Form

To sponsor FRC Team 9180, please complete the sponsorship form and return it by email or mail to Grandview Heights Secondary, attention Scott Smith. Sponsors may provide a company logo for inclusion on the robot, website, and other team materials. Tax receipts are available upon request.

Company: Contact:

Address: City/Postal Code:

Tel #: Email:

Fax #:

Amount: $----------

☐ I would like to request a tax receipt.

☐ I consent to the display of my company name and logo on the Ursa Major Robotics robot, website, and any additional team-approved materials.*

*Kindly attach your logo to the email if you wish for it to be included in our materials.

Please issue cheques to Grandview Heights Secondary and include “Robotics Team” in the memo.

Thank you for supporting our program. We truly value your involvement and look forward to hearing from you.

Sincerely,
Scott Smith
